CLARIS
ARCHITECTS · ENGINEERS · BUILDERS

NOW HIRING · DESIGN TEAM

Project Architect

Design the project, then watch it get built. At Claris you never hand off a drawing set and walk away.

WHY THIS ROLE IS DIFFERENT HERE

01 Builders down the hall

PMs, superintendents, and estimators work beside you, so constructability and budget get settled during design, not after bid day.

02 You see it built

Regular site visits and construction meetings let you check installation against your design and bring field lessons back to the next set.

03 Run your own projects

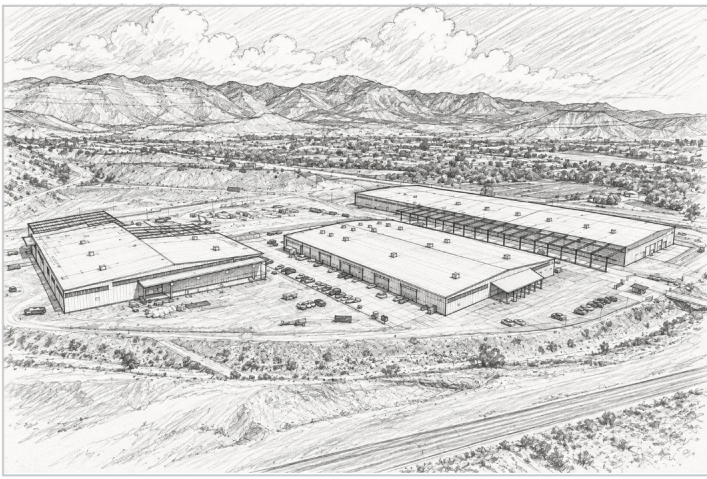

Lead the full design process: the schedule, your consultants and engineers, owner correspondence, and permit sets.

04 Architects at the top

You report to our director of architecture and engineering design, in a firm founded and led by a registered architect.

WHAT YOU WILL DO

- Prepare conceptual and construction documents in Revit
- Assemble and lead the design team, including outside consultants
- Own code review, zoning analysis, and COMcheck reports
- Review submittals and shop drawings and answer design RFIs
- Peer review sets and mentor junior architects
- Support your teammates and know they have your back

YOU WILL THRIVE HERE IF

- You care how the pieces come together in the real world
- You like working directly with clients
- You can keep several projects moving at different stages
- You are working toward your license, or already have it (we help pay for licenses and continuing ed)

THE WORK

Multifamily, healthcare, manufacturing, distribution and industrial, automotive, recreation, nonprofit, retail, and corporate office projects, designed in Revit with the in-house Claris project design team.
